DeliverEase – Taste the Convenience

DeliverEase Taste the Convenience

Vision: DeliverEase app vision is to set a new trend in the current food delivery business. This app will allow the customers to check prices and wait times across different food apps at one place before placing any order.

Epic

Epic-1: Build an app to improve the user experience which will provide them a friendly interface and cost-effective and time-efficient delivery suggestions all within the same app from the moment when they open the app till their order gets delivered.

Feature-1: Create a personalized dashboard for each user, these dashboards should adapt themselves to the user preferences and then display their favourite cuisines, past orders, and also recommend them the restaurants based on their previous orders.

Feature-3: Create a multi-app integration tool which will help the customers to compare prices and also the wait times across different food delivery apps.

Feature-2: Create an Artificial Intelligence chatbot which will assist the users in exploring the app, also provides them few suggestions on specific restaurants based on the user request, helps in tracking the orders and also for answering the user queries 24/7.

Feature-4: Create a feedback form for the users so that they can rate their food delivery service, food quality they received and also their experience with the app.

User Persona - I

Rohit Gurunath

General info

Age	36
Location	California
Occupation	Cricketer
Status	Married
Income	\$300K
Archetype	Informative

Bio

Rohit is a well known cricketer from California. He spends most of his time on the cricket field only. His training schedule will always leave him with limited time for planning and ordering his meals. He is a foodie, in his free time he enjoys trying new cuisines and he also cooks different varieties by watching cooking videos.

Goals

- Rohit wants to save his time to focus mostly on the game by reducing the time he usually spend for planning and ordering the meals.
- He wanted to manage his food expenses within his busy lifestyle.
- He is looking for different food options which needs to be tasty and healthy, also provide him all the nutrients to maintain his fitness.

Personality

Skills

Pain Points

- Rohit doesn't have much time for comparing prices across different platforms and ordering the food.
- He is spending lot more for his meals than what he actually planned for them in his budget.
- He is finding it difficult to choose healthy meals quickly and he is going with the repetitive meal choices due to the time constraints.

Behavior

Big Picture

Description: The DeliverEase app will improve the customer satisfaction by providing them with personalized recommendations on their dashboards based on their past orders and purchasing trends. This app will save a lot of time for the customers in comparing prices and wait times across different delivery apps in one place. It will also provides all day chat support to the customers using the inbuilt customer service. The customer feedback will be taken at regular intervals and will be considered for improving the app and for providing better service to them.

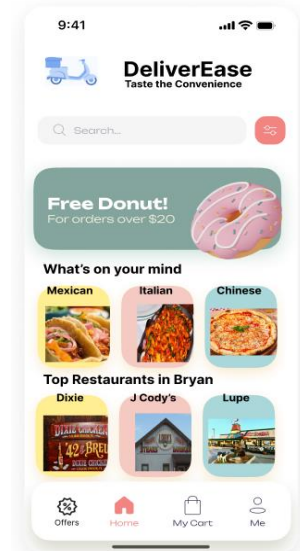

Story Board

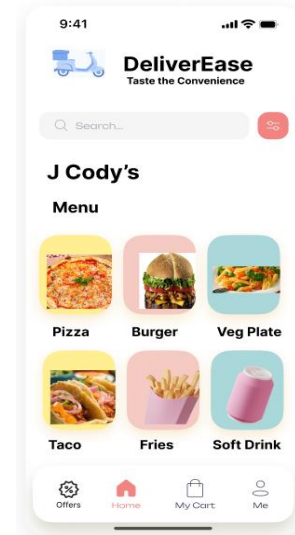

After a tiring day of classes, Root is very tired and hungry, so he decides to order food online using DeliverEase.

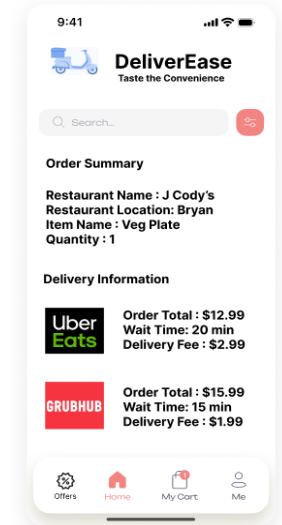

Root is confused about where to order, so he checks for the nearby restaurants on the DeliverEase app and selects a restaurant.

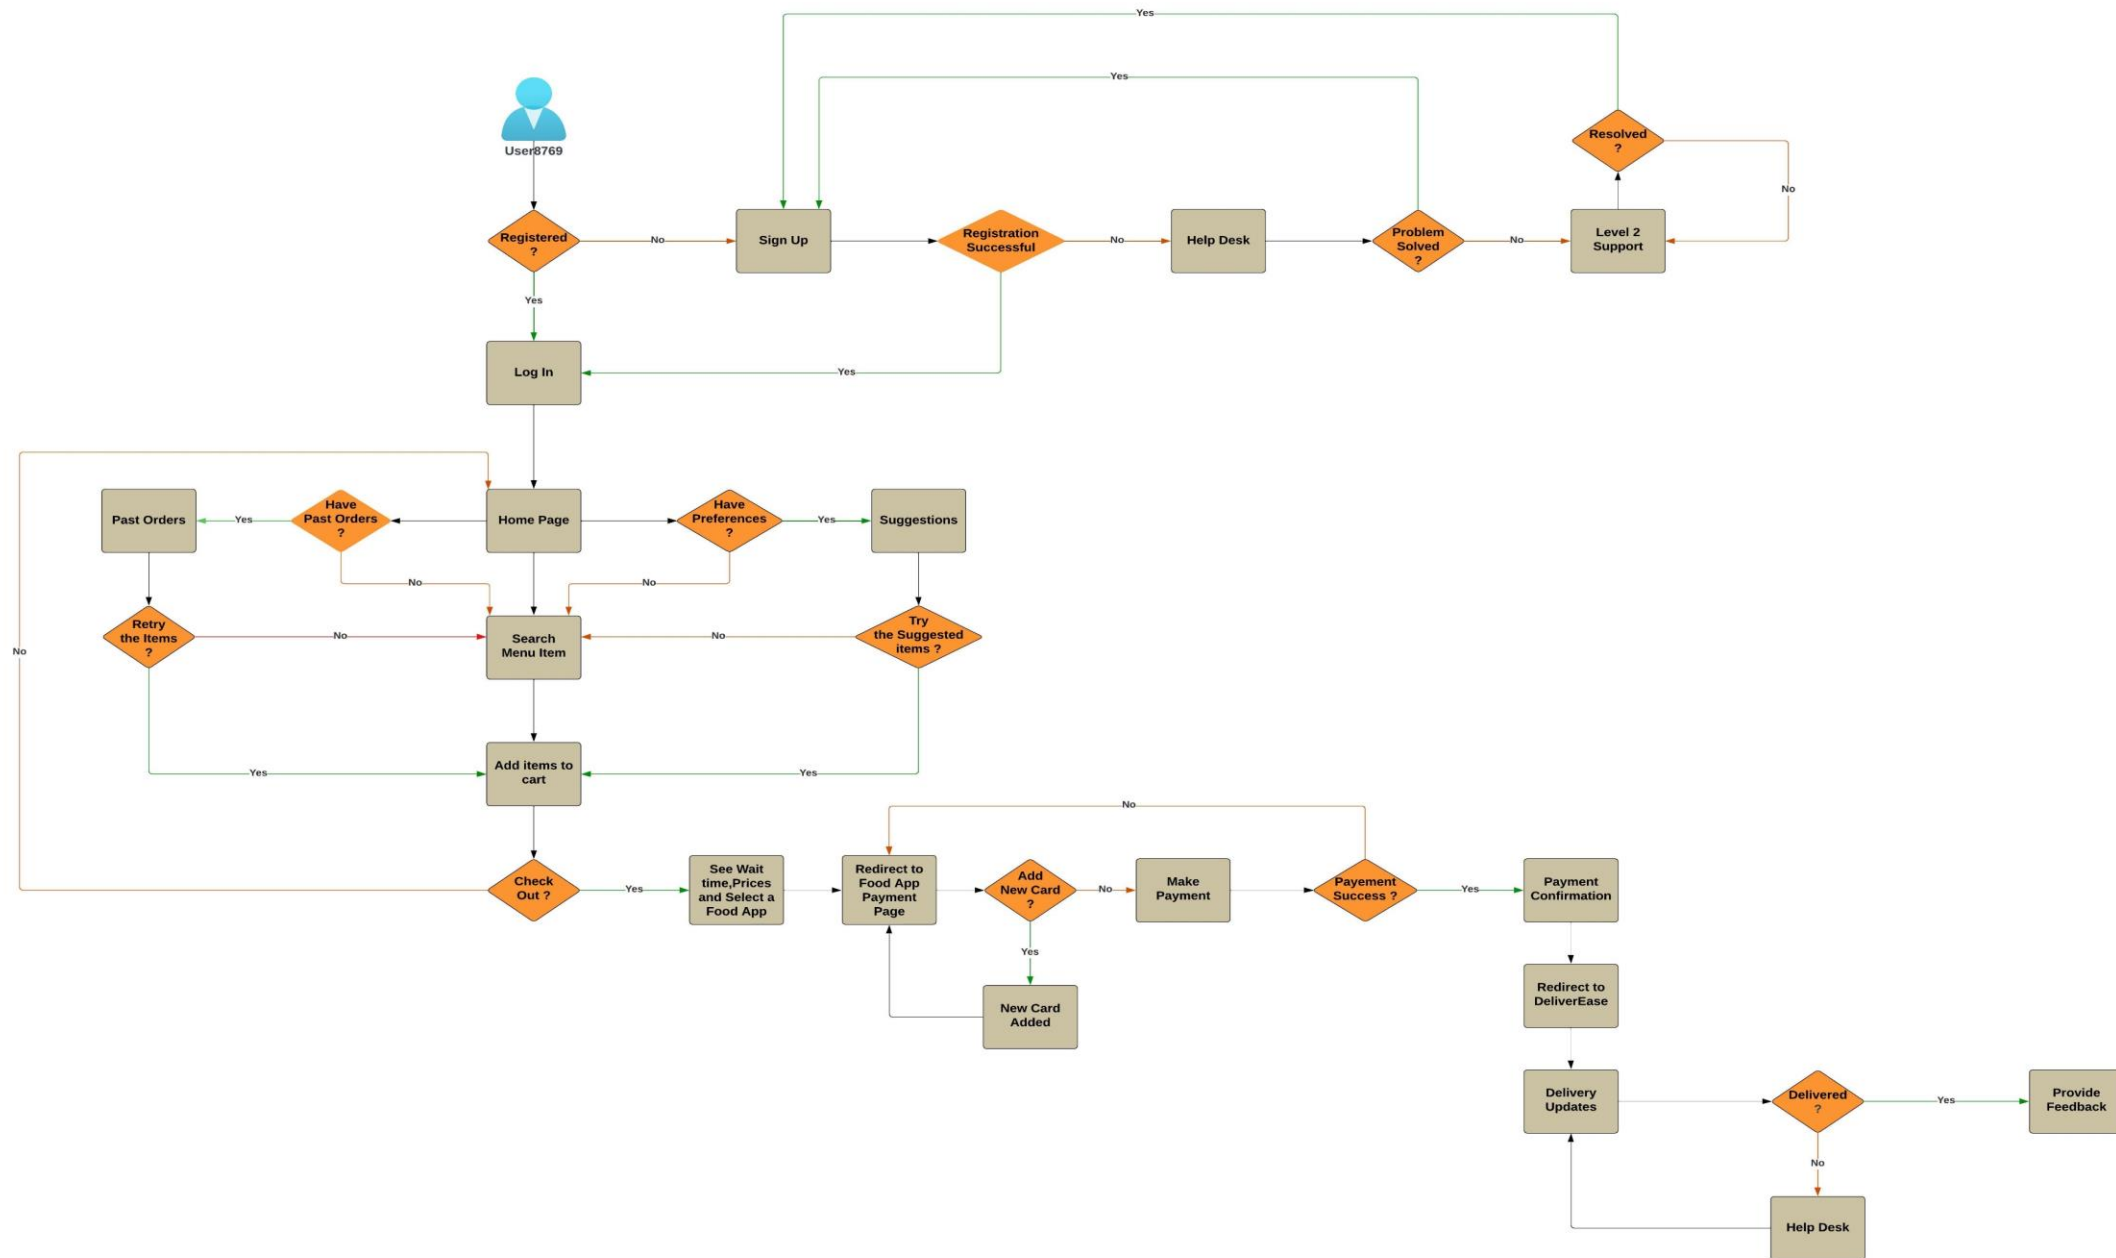

Root can use the filter of the menu option to find the cuisine he is looking for easily. He then adds items to the cart and goes to the check-out page.

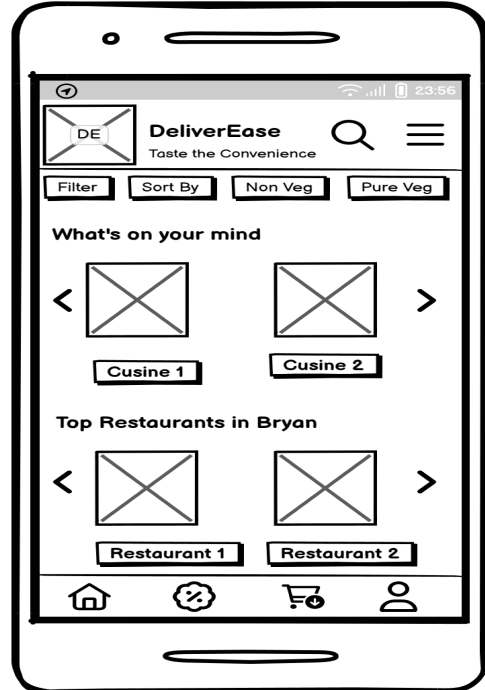

On the check-out page, Root can compare the prices and wait times across the different food delivery apps, choose one from them, pay the amount and enjoy the food
